

RAUNAK KUMARI

Software Engineer | CSE (AI/ML)

Noida, Uttar Pradesh | +91 8271022786 | kumriraunak1920@gmail.com
GitHub | LinkedIn | Portfolio

Education

ITS Engineering College, Greater Noida

2024 – Present

Bachelor of Technology in Computer Science Engineering – Artificial Intelligence & Machine Learning

Experience

Artificial Intelligence Intern

Aug 2026 – Sep 2026

InAmigos Foundation

- Applied Python and core Artificial Intelligence concepts to practical AI project requirements.
- Performed data analysis and processing using Python-based workflows to support AI functionality and project development.

Artificial Intelligence & Machine Learning Intern

Jun 2026 – Jul 2026

CodeMore Technologies

- Prepared and analyzed structured datasets using Python and Pandas, including data preprocessing and exploratory data analysis.
- Participated in machine learning workflows covering data preparation, model development, and model evaluation.

Web Developer Intern

May 2026 – Jun 2026

InAmigos Foundation

- Built responsive web interfaces using HTML, CSS, and JavaScript for user-facing web functionality.
- Debugged frontend issues and refined implemented features to improve website functionality and usability.

Projects

Smart Matrimonial & Event Service Platform

- Developed a full-stack platform with user profiles, matchmaking, real-time chat, notifications, consultant services, booking management, and an admin dashboard.
- Implemented JWT-based authentication and role-based access control with RESTful backend services and MongoDB.
- Tech:** React.js, Node.js, Express.js, MongoDB, REST APIs, JWT, RBAC

Scan N Go – Smart Self-Checkout Application

- Developed a smart self-checkout application for scanning product barcodes, managing shopping carts, and completing digital payments.
- Built the mobile application using React Native and TypeScript to support a self-service checkout workflow.
- Tech:** React Native, TypeScript, Barcode Scanning, APIs

AEROSAVE – AI-Powered Search & Rescue System

- Developed an AI-powered search-and-rescue system designed to support autonomous aerial monitoring and rescue operations.
- Integrated YOLOv8-based object detection with a drone-control workflow using PX4 and Pixhawk, along with GPS and LoRa communication.
- Developed a web-based rescue dashboard to visualize and monitor the system during search-and-rescue operations.
- Tech:** Python, YOLOv8, PX4, Pixhawk, GPS, LoRa

Technical Skills

Languages	Python, Java, JavaScript, TypeScript
Software Development	React.js, React Native, Node.js, Express.js, REST APIs, HTML5, CSS3
AI/ML	Machine Learning, Pandas, Scikit-learn, Generative AI
Databases	MongoDB, Firebase, SQL
Cloud & Tools	AWS, Azure, Git, GitHub, VS Code
Core CS	Data Structures & Algorithms, OOP, DBMS, Operating Systems

Certifications & Achievements

- Solved 100+ DSA problems on LeetCode, covering arrays, strings, searching, trees, graphs, and dynamic programming.
- AWS Academy Graduate – Cloud Foundations
- Microsoft Azure AI Fundamentals
- ReactJS & Node.js Certification – LetsUpgrade
- Mastering Data Structures & Algorithms using Java
- The Complete SQL Bootcamp
- Generative AI Certification
